**UniPresence™** is Consilium Software's Unified Communications (UC) product for enhancing enterprise communication & collaboration. By enabling integration of the desktop with the enterprise telephony environment, UniPresence™ improves productivity and reduces operating costs. Enterprises get the UC edge with rich presence, collaboration and mobility features in an appliance that takes only two days to implement.

### Rich Presence

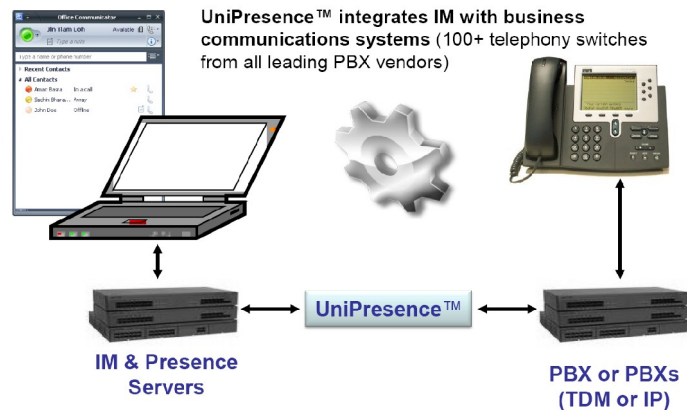

Presence provides an indication of user status in real time. UniPresence™ takes it a step further by integrating presence information from multi-vendor telephony equipment and enterprise instant messaging (IM) services. This "rich" presence is aware of the user's phone status, allowing staff to reach one another on the first try, instead of having to leave and retrieve voicemail.

### Enhanced Collaboration

With UniPresence™ the desktop is the launch pad for all communications – make, accept and conference calls as well as text-chat from the same unified tool, click-to-call from frequently-used applications, and email integration. The result is faster communications, easier and cost-effective collaboration between employees, customers and partners.

### Intelligent Mobility

UniPresence™ allows the user to see and control incoming calls from any location in real time. It can also intelligently reach the user at the closest device, allowing single-number reach based on presence and location settings. In addition, users can make and receive calls on a soft-phone on their computer when away from office, using the office PBX thereby reducing the use of expensive cell phone auto-roaming and international (IDD) calls.

### Benefits

- Productivity gains from the use of presence technology – 32 minutes\* saved per employee per day.
- Effective collaboration reduces human latency in business processes and accelerates decision time.
- Significantly reduced telecom costs due to increased first-attempt contact, less reliance on third-party conferencing and smaller phone bills for the mobile workforce – thousands of dollars saved per month.
- Helps organizations enable teleworking and reduce commuting, make better use of office space, and reduce travel spending.
- UC-enables the enterprise in two days, and with minimum capital expenditure by leveraging existing multi-vendor PBX's and handsets.
